Report Card: Eramosa Karst Conservation Area

Site Information

Stream	Potruff Spring
Land Management	Hamilton Conservation Authority (HCA)
URBAN Monitoring	Sampled in: May 2010-2012, 2017
Urban Land Use	**14.7%** in watershed
Road Density	**77.4 m/ha** in watershed
Ecological Importance	Area of natural and scientific interest; upcoming urban development nearby

Site Summary

- Nitrogen and phosphorus levels are high and unstable; no clear trends since 2010
- The uptick in phosphorus inputs in 2017 contributed to higher chlorophyll and turbidity values
- There are still no pollution intolerant mayflies, caddisflies or stoneflies (EPT) in this stream
- Water quality conditioned appeared to be improving for a time but more recent data indicates a lack of clear trends; the dominance of pollution tolerant taxa indicate an impaired system

Overall Status 2017: Impaired
